Aldine Drive Slope Restoration Project

Project Background

The inordinate amount of rainfall from the 2004/2005 rainy season caused erosion of sections of the slope along the south side of Aldine Drive between Fairmount Avenue and Van Dyke Avenue located in Kensington-Talmadge Community Area of Council District-3. The City and the State declared a state of emergency thus enabling the project to receive Federal Grants to repair the damage caused by the rain.

Project Overview

The purpose of this project is to stabilize the road of the failing hillside along the Aldine Drive between Van Dyke Ave and Fairmount Ave. The Aldine Drive and Fairmount Avenue Slope Restoration project consists of the construction of two cast in place concrete retaining walls, each measuring approximately 360 LF in length and 6 to 26 feet in height. The retaining walls would contain architectural elements and the slopes will be backfilled and landscaped with native, non-invasive plant species.

Construction Schedule

Construction Start: April 2011
Construction Duration: 6 months

Cost

The estimated construction cost is \$2,357,300.

“Working together to engineer a better tomorrow.”
